

Self-Driving Car

PiCar X

Rozhkov Sergei, Seghini Alessandro

Universität Passau
Applied AI Lab

1. Introduction and Goals
2. Current State
3. Steps to reach our goal
4. Problems and approaches

Introduction and Goals

- ▶ AI-driven self-driving robot car equipped with a Raspberry Pi 4 and a video camera.

Different ideas → Shared baseline

- ▶ Follow checkpoints
 - ▶ tape on the floor
 - ▶ cartons with a letter

- ▶ **Self-driving taxi:** make the car go from point A to point B, knowing the layout of the city and the checkpoints.
- ▶ **Self-driving rover:** make the car drive until it finds a defined object/landmark.

Current State

What can the car do already?

- ▶ Hardware
 - ▶ Raspberry Pi 4 with 4 GB of RAM
 - ▶ Video Camera
 - ▶ Wireless Connection
- ▶ Software
 - ▶ Detect objects (like stop signs, based on YOLO library)
 - ▶ Follow a line on the floor
 - ▶ Stop when seeing an object

Steps to reach our goal

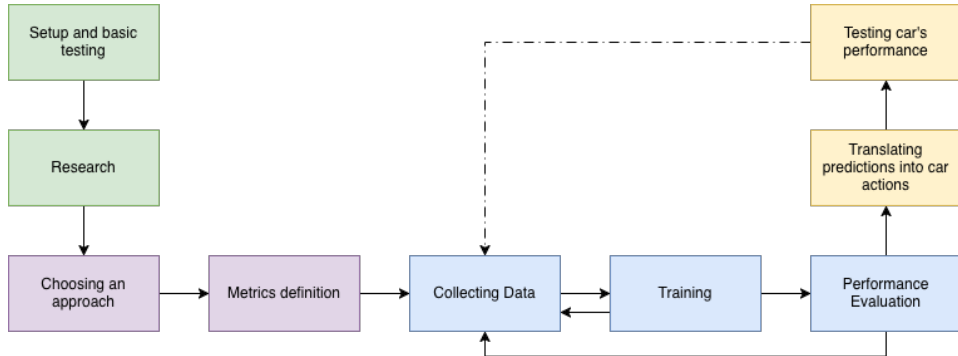

- ▶ OS Installation
- ▶ Car testing and calibration
 - ▶ steering angle
 - ▶ camera view angle
 - ▶ spinning rotation
- ▶ Library testing
- ▶ Documenting the existing library¹

¹<https://github.com/psnj/roboeye.git>

- ▶ Define what the checkpoints and the driving environment will look like
- ▶ Research the existing approaches to self-driving cars²
- ▶ Choose an approach (model) based on limitations (computing power onboard, connection speed)
- ▶ Define the metrics for model performance

²Example: End to End Learning for Self-Driving Cars by Nvidia

- ▶ Collect data
 - ▶ manually - automatically
 - ▶ driving examples
 - ▶ car images
- ▶ Train/Finetune/Optimize model chosen
- ▶ Translate model's predictions into car's commands
- ▶ Test car's performance

Problems and approaches

- ▶ Library not working/containing bugs
- ▶ Changing environment/conditions
- ▶ Incorrect metrics selected
- ▶ Poor image quality

- ▶ Model running onboard
 - ▶ Low processing power
 - ▶ Model selection limitations
 - ▶ Advantages: low latency and autonomy
- ▶ Model running on PC and connected to the car
 - ▶ Car is not fully autonomous
 - ▶ Connection speed
 - ▶ Advantage: processing power
